

## Binary Molecular Nomenclature

Rules for Binary Molecular Compounds	Prefixes
1. The naming system is for compounds composed of two <u>nonmetallic</u> elements.	1 – mono
2. The first element keeps its name	2 – di
a. The first element gets a prefix if it has a subscript in the formula	3 – tri
3. The second element gets the <i>-ide</i> suffix (ending)	4 – tetra
a. The second element ALWAYS gets a prefix	5 – penta
	6 – hexa
